On the *Dolichopodidae* fauna of Sierra Leone (*Diptera*)

Igor Ya. Grichanov ¹

Abstract: On the *Dolichopodidae* fauna of Sierra Leone (*Diptera*). *Cesa News* 84: 1-11, 26 figs. New records of *Dolichopodidae* from Sierra Leone, resulting from recent expeditions, are presented. Records of 13 species are provided, including 2 genera and 10 species new for Sierra Leone. A new synonym is established: *Diaphorus niger* Vanschuytbroeck, 1951 (= *Diaphorus rutshuruensis* Vanschuytbroeck, 1951). A list of *Dolichopodidae* of the country is presented for the first time, including 46 species. Light micrographs of key characters of some species are included.

Key words: *Diptera*, *Empidoidea*, *Dolichopodidae*, fauna, Sierra Leone, new records.

Introduction

Sierra Leone is located on the west coast of Africa, lying close to equator. The centre of the country is a region of lowland plains, containing forests, bush and farmland. The northern section of this is a part of the Guinean forest-savanna mosaic ecoregion, while the south is rain-forested plains and farmland. The Atlantic coast has areas of low-lying Guinean mangroves swamp.

The first contribution to the fauna of long-legged flies of Sierra Leone was made by Walker (1849) who described *Gigantosciapus gemmarius* (in the genus *Psilopus* Meigen) from this country. Later Becker (1923), Curran (1927), Parent (1931, 1934, 1937, 1939), Rampini (1982) and Grichanov (1997, 1998, 1999, 2008) described 16 new species from Sierra Leone. Additional 19 species were recorded from the country in sparse faunistic and taxonomic papers.

This paper presents new records for 13 Sierra Leonean dolichopodid species, ten of which are recorded from the country for the first time. The new records are resulting from W. Rossi (Venice, Italy) recent trip to Western Area (Sussex) in addition to the Lund University (MZLU, Sweden) Sierra Leone expedition in 1993. Most specimens are placed in vials filled with 70% alcohol and housed in the author's collection. MZLU material was dried and mounted on pins and placed in the museum drawers. A list of Dolichopodidae of the country is presented for the first time, including 46 species. Information on world distribution for each species listed follows Grichanov (2003–2012). Type localities are provided and country lists are arranged alphabetically. In addition, a key to the species of Afrotropical *Diaphorus nigricans* group based on male characters is compiled. Original light micrographs of key characters of some species are included.

5. *Diaphorus niger* Vanschuytbroeck, 1951 (Figs. 10–11)

=*Diaphorus rutshuruensis* Vanschuytbroeck, 1951: 126, **syn. nov.** Type locality: Congo Belge: Kivu, Rutshuru.

Material. 2♂, Sierra Leone: Freetown, Cape Sierra Hotel area, 13°17'W, 8°31'N, 19.XI.1993, loc. 2, swept along road sides / Lund University Sierra Leone Expedition 1993, leg. L. Cederholm – R. Danielsson – R. Hall.

Remarks. Both *D. niger* male holotype and *D. rutshuruensis* female holotype were examined in the collection of the Royal Museum for Central Africa, Tervuren, Belgium (MRAC). They have no principal differences in external morphology. In addition, the type localities of the two type specimens are rather close to each other. Four more *D. rutshuruensis* female paratypes (MRAC) belong to *Diaphorus* sp., *Sympycnus* sp. and *Chrysotus* sp.

Distribution. Type locality: Congo Belge: May-ya-Moto. Afrotropical: DR Congo, Sierra Leone. New for Sierra Leone.

6. *Diaphorus rita* Curran, 1926 (Figs. 12–13)

Material. 1♂, Sierra Leone: Western Area, Sussex, 27.I.2012, W.Rossi.

Distribution. Type locality: South Africa: Mpumalanga: Barberton. Afrotropical: Gabon, Sierra Leone, South Africa. New for Sierra Leone.

7. *Diaphorus schoutedeni* Curran, 1925 (Figs. 14–15)

Material. 2♂, Sierra Leone: Western Area, Sussex, 27.I.2012, W.Rossi.

Distribution. Type locality: Belgian Congo: Katanga, Lubumbashi. Afrotropical: DR Congo, Kenya, Sierra Leone. New for Sierra Leone.

Remarks: The two males examined are identical except for the presence of one claw and one simple seta on mid tarsomere 5 in one specimen, whereas the claws on mid tarsi are totally missing in the second specimen.

Key to species of Afrotropical *Diaphorus nigricans* group based on male characters

Remarks: The *Diaphorus nigricans* species group differs distinctly from other Afrotropical *Diaphorus* in the following combination of characters: usually small species (2–3 mm); abdomen entirely dark, usually black-green; femora mostly black-brown, with extreme apices often yellow; face broad, eyes contiguous or strongly convergent above antennae; palpus black-brown.

1. Fore and mid tarsi without claws; sometimes mid tarsus with one claw 2
 - Only fore tarsus without claws; mid tarsus with two claws 3
2. Legs black, apex of fore coxa and all knees yellow; all femora with posteroventral row of setae, half as long as femur diameter; hind tarsus with one claw *lavinia* Curran, 1926
 - All tibia yellow; fore femur with full row of posteroventral setae, as long as femur diameter; mid and hind femora with several long subapical posteroventral setae; hind tarsus with two claws *schoutedeni* Curran, 1925
3. All femora practically without remarkable ciliation, with at most 2–3 subapical setae; halter black *nigricans* Meigen, 1824 (= *consimilis* Parent, 1937)
 - At least fore femur with row of stiff posteroventral setae, as long as femur diameter 4
4. Hind femur curved, with brush of long fine posterior hairs at apex and anteroventral row of long fine setae in apical half; mid femur without long setae; wing fumose *amplus* Curran, 1926
 - Hind femur simple, without brush of long posterior hairs 5
5. All femora with ventral setae, longer than femur diameter; wing fumose; body 4.5 mm *adumbratus* Parent, 1931
 - Mid and hind femora without long ventral setae, with long posteroventral setae at apex only; body 2–3 mm 6
6. Haltere black *rita* Curran, 1926
 - Haltere yellow *niger* Vanschuytbroeck, 1951 (= *rutshuruensis* Vanschuytbroeck, 1951)

Dolichopodinae* Latreille, 1809**Apelastoneurus* Grichanov, 2006****8. *Apelastoneurus afromaculatus* (Dyte & Smith, 1980)**

Distribution. Type locality: Congo-Brazzaville. Afrotropical: Congo (Brazzaville), Nigeria, Sierra Leone.

Neohercostomus* Grichanov, 2011*9. *Neohercostomus itineris* (Grichanov, 2004)**

Material. 1♂, Sierra Leone: Western Area, Sussex, 27.I.2012, W.Rossi.

Distribution. Type locality: Cameroon: N'Kolbisson. Afrotropical: Cameroon, Sierra Leone. New for Sierra Leone.

Pseudopelastoneurus* Grichanov, 2006*10. *Pseudopelastoneurus diversifemur* (Parent, 1935)**

Distribution. Type locality: Rutshuru [DR Congo]. Afrotropical: Angola, Cameroon, Central African Republic, DR Congo, Equatorial Guinea (Fernando Poo), Gabon, Ghana, Ivory Coast, Kenya, Sierra Leone, Uganda.

11. *Pseudopelastoneurus diversipes* (Parent, 1934)

Distribution. Type locality: Sierra Leone. Afrotropical: Cameroon, Sierra Leone.

Tachytrechus* Haliday in Walker, 1851*12. *Tachytrechus insolitus* Parent, 1931 (Figs. 16–18)**

Material. 1♂, Sierra Leone: Western Area, Sussex, 27.I.2012, W.Rossi.

Distribution. Type locality: Sierra Leone. Afrotropical: Sierra Leone.

A new *Mylabris* species and subgenus for the fauna of Turkey (Coleoptera, Meloidae)

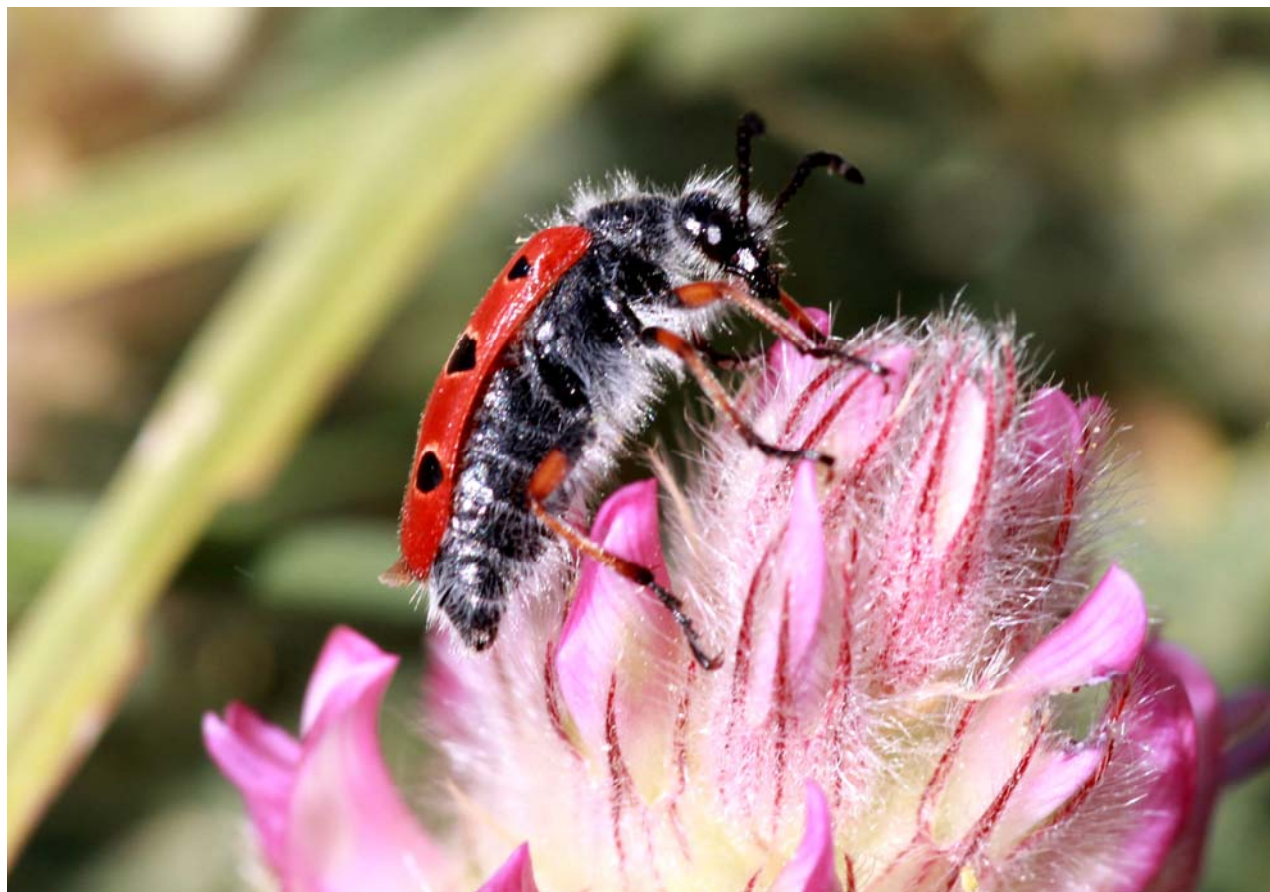

Muhabbet Kemal Ahmet Ömer Koçak**Abstract:** A new *Mylabris* species and subgenus for the fauna of Turkey (Coleoptera, Meloidae).
Cesa News 84: 12-14, 4 figs.This short paper deals with the first record of *Mylabris klugi* Redt. and the subgenus *Argabris* Kuz. in Turkey. Illustrations of the adult insect and its habitat are given.**Key words:** *Mylabris klugi*, Coleoptera, Meloidae, *Argabris*, fauna, Hakkari, Turkey.

This short, pictorial note gives an idea about the recent field studies of the authors on the Meloidae, within the Entomofauna Project of the Cesa. Although the Meloidae fauna of Turkey is very rich, taxonomical, faunistical and biological information about most of the species are still insufficient. Most comprehensive modern faunistical study belongs apparently to Bologna (1979). In the recently published articles of the authors (Kemal & Koçak, 2011; Koçak & Kemal, 2010), number of the meloid species in Turkey is given as 178. This number is now updated to 183. *Mylabris* species in Turkey are comparatively richer in species than other genera, easily seen and collected in the fields. Colourations and markings of the elytra of some species vary greatly; therefore their identifications are rather difficult from the external characters.

Mylabris klugi Redtenbacher, 1850 described from South Iran and distributed in South West Asia and in Afghanistan. This Central- West Asiatic species is easily recognizable from other relatives in Turkey by the markings on the elytra (Marseul, 1873; Jacobson, 1905-1915). From Iran to Central Asia, it is represented by three subspecies, i.e., nominate subspecies, ssp. *kabuliensis* and ssp. *lacustris*. The last two taxa were described by Kaszab (1958) from Afghanistan. The species was not recorded in Turkey so far. During our expeditions to Hakkari Province (Karadağ), we found this species in the mountain steppe for the first time (**Figs.1-4**). This record reveals also the subgenus *Argabris* Kuzin, 1954 (type-species: *Meloe ocellata* (Pallas, 1773)) as new to the fauna of Turkey.

Revised list of the scientific names referring to the persons based upon the info-system of the Cesa 1- Lepidoptera

Ahmet Ömer Koçak Muhabbet Kemal**Abstract:** Revised list of the scientific names referring to the persons based upon the info-system of the Cesa 1- Lepidoptera. *Cesa News* 84: 15-120.

This paper deals with the scientific names referred to the persons in Lepidoptera. An updated list of the genus- and species-group taxa comprises 12566 scientific names in the World. The list is based upon the info-system of the Cesa. A brief analysis on the patronyms is given.

Key words: *Lepidoptera*, patronyms, list.

The first comprehensive list on the patronyms among the genus- and species group names of the Lepidoptera was made by Kemal & Koçak (2008)². Totally 5175 patronyms of the Lepidoptera, found especially in the Old World are listed there. Later, the authors published the second one, the expanded list of the patronyms in Lepidoptera, with 7024 scientific names.³ In the present list, the patronyms are revised and expanded to 12566, among the valid genus- and species group names.⁴ They are listed below alphabetically with their families.

Table 1 – Number of the patronyms between 18-21. Centuries.

1758- 1759	1760- 1769	1770- 1779	1780- 1789	1790- 1799	1800- 1809	1810- 1819	1820- 1829	1830- 1839	1840- 1849	1850- 1859	1860- 1869	1870- 1879	1880- 1889
14	10	7	28	20	6	8	62	140	114	259	320	446	732
1890- 1899	1900- 1909	1910- 1919	1920- 1929	1930- 1939	1940- 1949	1950- 1959	1960- 1969	1970- 1979	1980- 1989	1990- 1999	2000- 2009	2010- 2012	
783	760	719	720	964	399	711	872	1023	1187	1321	855	79	

According to a brief numerical analysis of the patronyms, number of such names are remarkably low until 1820. Between 1880-1929 around 700 patronyms were proposed in each decades. During the Second World War, proposed patronyms reduced to 399 conspicuously. Thereafter, gradually increasing number reaches to 1321 between the period of 1990-1999. Records after the year of 2000 seems rather incomplete in our database (Table 1).
